

Step 5: Sketch Designs

Initial and Final Due Date: Fourth Week

This step is just an exercise in exploring different Design approaches to your app. Your team will put together at least three different designs for app, perhaps showing different moods or targeting different audiences. These are meant to be very rough designs that only cover the most basic functionality of your app. That is, just one or two screens, and those should only show the major GUI elements.

For example, if you are building an app for organizing planting in a garden, you might consider one design tailored to casual users that love their iPads, one for Master Gardeners, and one for grandfathers who have not heard of the face-book. Your designs should help you think about different ways of organizing the information, and different levels of user-interaction and customization.

Or, if you are building a mobile game, you might consider one design tailored to pre-teen girls, one for twenty-something hipsters, and one for middle-aged College professors. What are the features of your game that would need to be different? Which ones do you think remain equally engaging across the different populations? Even if you have settled on a particular target audience for your game, say slacker college kids, you can still try different themes: a goth theme, a Jimmy Buffet theme, an 8-bit theme, making the different designs more than just cosmetically different. Change the interaction.

Your designs should start with free-hand drawings (do not use a sketching tool, that is the next step). Just a couple of pages for each one, showing one or two screens.
